Welcome from Dr. Avery August

On behalf of the Steering Committee for Annual Biomedical Research Conference for Minoritized Scientists (ABRCMS), and the American Society for Microbiology, I would like to extend a hearty welcome to Phoenix, Arizona, and ABRCMS 2023. The meeting continues to evolve in response to ongoing changes, including changes in the national environment that make it even more of an imperative that ABRCMS exists. I continue to be heartened and extremely proud that ABRCMS continues its very strong traditions of investment in diversity and inclusion with excellence in STEM, because to do otherwise is to not invest in our future.

And so our theme this year is "*Investing in the Future.*" At ABRCMS, we have a long history of working to create a truly inclusive community of scientists, meeting, talking about science, and supporting each other. And we will not stop doing so. Since our first meeting in 2001, ABRCMS has been a place where we inspire and support the careers of leaders who are the future of a more diverse scientific enterprise. Starting with a focus on undergraduate students, we are now a thriving community of scientists at all career stages, with increased opportunities for support across the career spectrum. And each year, we welcome new scientists to our fold, because ABRCMS is an investment in the future, all of our futures, in STEM.

The core of ABRCMS, and our theme, is creating the future leaders of STEM. We do this by bringing the most cutting edge science, from plenary speakers Neuroscientist Dr. Gina Poe, human rights advocate Eddie Ndopu, described by Time magazine as "...one of the most powerful disabled people on the planet...", to Dr. Carlos Bustamante, former Professor of Genetics and Biomedical Data Science at Stanford University, and Founder and CEO of Galatea Bio Inc. Of course, these speakers are just examples of the number of accomplished speakers from across the career spectrum, from undergraduate and post-baccalaureate students presenting their work, to graduate students sharing their thesis work in our graduate symposium, to independent scientists at all career stages, all presenting leading-edge scientific talks. And a staple of ABRCMS is investing in our future, with a wide range of professional development programs to meet the many needs of our participants, no matter the career stage. Personally, I always look forward to the excited faces of those new to ABRCMS as they discover what we have to offer, as well as that feeling of "community" that those of us who have been to the meeting many times feel when we arrive. Welcome to our supportive scientific community.

So, as you join us for the next few days, take advantage of this unique place, build your network, soak in the science (and ask lots of questions!), visit with the exhibitors, be prepared to mentor, and be mentored, support and be supported, because ABRCMS built this scientific community for us, so that we can build the future of STEM.

The ABRCMS Steering Committee, the ASM staff, the exhibitors have worked hard to deliver everything you see during your time here. Many volunteer judges, presenters, convention center support staff are all here doing a remarkable job to make this meeting possible. I would like to thank them all in advance for all their hard work making this meeting a success. And as always, we are eternally grateful for the continued support of Division of Training, Workforce Development, and Diversity at the National Institute of General Medical Sciences, NIH, whose funding has continued to make ABRCMS what it is.

With my warmest wishes,

Avery August, Ph.D.
Chairperson, ABRCMS

Greetings from NIH

On behalf of the National Institutes of Health's National Institute of General Medical Sciences (NIGMS), we would like to welcome you to the 2023 Annual Biomedical Research Conference for Minoritized Scientists. We are very proud to support this meeting, which brings together a community of outstanding scientists for stimulating discussions of research, careers, and more.

This meeting is one element of our many activities in the areas of training, workforce development, diversity, and research capacity building. Our NIGMS programs range from the high school level through the undergraduate, graduate, postdoctoral and faculty levels. For example, we support an array of programs to enhance diversity in the biomedical research workforce including Science Education Partnership Awards, Bridges to the Baccalaureate, Building Infrastructure Leading to Diversity, Maximizing Access to Research Careers, Research Training Initiative for Scientific Enhancement, Initiative for Maximizing Student Development, Postbaccalaureate Research Education, Bridges to the Doctorate, Institutional Research and Academic Career Development Awards, Maximizing Opportunities for Scientific and Academic Independent Careers, the Diversity Supplement Program, the Native American Research Centers for Health, the Support for Research Excellence Programs, and the National Research Mentoring Network.

For those of you who are attending as mentors and sponsors, we truly appreciate your dedication and many contributions to your students and our shared goals. For those of you still in training, we hope that your involvement in this meeting further inspires and motivates you to pursue careers and leadership positions in the biomedical research workforce and leadership roles in biomedical science. During your time here, you will gain important allies for your future: a community of peers who will become your colleagues and friends as well as a network of scientists and mentors who are deeply committed to your success in pursuit of a research doctorate and a career in the biomedical research workforce.

We encourage you to make the most of the meeting and take every advantage of the resources and opportunities it offers to help you prepare for the next stages of your research career. We look forward to seeing your presentations and talking to you over the course of the next few days.

Sincerely,

Jon R. Lorsch, Ph.D.
